

Why Minnesota Needs Health Reform: By the Numbers

Our broken health care system forces families and businesses to struggle with skyrocketing costs and puts millions of Americans at risk of losing the insurance they have now. Here is how our broken health care system affects people in Minnesota.

- 190 residents of Minnesota are losing health insurance every day, and 14,000 Americans nationwide lose insurance daily.
- The average family premium in Minnesota costs \$400 more because our system fails to cover everyone—and \$1,100 more nationally.
- Our broken health insurance system will cost the Minnesota economy as much as \$2.6 billion this year in productivity losses due to the uninsured—and up to \$248 billion nationally.
- In Minnesota there has been a 20 percent increase in the uninsured rate since 2007.
- 550,000 are uninsured today in Minnesota.
- In Minnesota the combined market share of the top two insurers is 76 percent, limiting employers' and families' health insurance options as well as the care they receive.
- The average family premium will rise from \$13,167 to \$22,467 by 2019 in Minnesota without health care reform.
- In Minnesota, without health care reform, 67,750 will have lost coverage from January 2008 to December 2010.
- In Minnesota, 226,000 people would gain coverage as a result of the House health care reform bill by 2013, and 363,000 would gain coverage by 2019.
- A typical Minnesota family will pay \$22,467 for health coverage in 2019 without health care reform.

In their own words

My brother-in-law was uninsured and in a car accident. He rolled his truck during the winter and was taken to the closest hospital. They checked him out but didn't take x-rays or do other more expensive tests because he was not covered. They sent him home that night. He was in extreme pain and ended up at the public hospital in town. Upon further look he had in fact broken his neck. Had he moved the wrong way after he was sent home from the first hospital he would have died. We need coverage for all.

Additional national statistics

- 128,000 small business jobs and \$84 billion per year can be saved with health reform.
- At least 62.1 percent of bankruptcies in 2007 were medical bankruptcies.
- The typical household will pay \$15,000 for health care this year—and they'll pay \$18,000 next year.
- The typical household will be paying \$36,000 for health care by 2020.
- We can save \$600 billion by modernizing our health care system.
- Twenty-five million Americans are underinsured, meaning that out-of-pocket health care costs absorbed 10 percent or more of a family's income or 5 percent of an adult's income.
- Almost 52 million Americans are uninsured.
- Approximately 87 million people—one in three Americans—went without health insurance for some period during 2007 and 2008.
