The Economics of Clean Energy in Washington

Jobs, Savings, Investment, Competitiveness, and the Costs of Inaction

Last updated on: October 6, 2009

Jobs

• There were 17,013 clean-energy jobs and 2,008 clean-energy businesses in Washington as of 2007. This only counts direct jobs and not the many indirect jobs in industries that support the clean energy economy.

• The number of clean-energy jobs in Washington grew by 0.5 percent between 1998 and 2007.

• Washington will see $3.2 billion in new public and private investment due to programs and incentives under the American Recovery and Reinvestment Act and American Clean Energy and Security Act. These investments will lead to 33,505 net new clean-energy jobs in Washington—even assuming some potential job losses in the fossil fuel sector as workers transition into the clean energy economy.

• Washington needs these good-paying, private sector jobs—the state’s unemployment rate was at 9.2 percent as of August 2009.

• Green jobs in Washington were distributed among the following sectors in 2008:
  – Conservation and pollution mitigation: 67.1 percent
  – Environmentally friendly production: 6.1 percent
  – Training and support: 8 percent
  – Energy efficiency: 6.7 percent
  – Clean energy: 12 percent
Consumer energy bill savings

• The average American family’s annual spending on oil, gas, and electricity increased by $1,100 under the Bush administration’s energy policies. But American electricity and fuel bills would go down under the consumer protection provisions in the ACES bill.

• Emissions allowances allocated in the ACES bill for state efficiency programs alone will save Washingtonians $736 million between 2012 and 2020.

• The average household in Washington will see a monthly savings of $5.20 on their electricity bill by 2020 due to ACES’ consumer protection and energy-efficiency provisions.

• Households in Washington will also save $9.82 on gasoline each month by 2020 due to lower oil prices and more fuel-efficient vehicles under ACES.

Investment and innovation

• The clean energy economy is already growing in Washington. Private companies in Washington invested $635.1 million in clean energy from 2006 – 2008 through venture capital funds.

• An additional $3.2 billion of public and private investment would flow into clean energy and energy efficiency in Washington under the clean-energy investment provisions in the ACES bill and the ARRA stimulus package.

• Washington’s 2,008 clean-energy businesses patented 195 new clean-energy technologies in 2007 alone. Passing a strong clean-energy jobs bill this session is the best thing congress can do to unlock even more innovation and entrepreneurship across Washington and the nation.

• In Seattle, clean-energy company Mithun, Inc. designs sustainable buildings and low-carbon urban centers.

American competitiveness and energy independence

• The people of Washington spent more than $10.5 billion on imported crude oil in 2007 alone—more than $1,603 per person.

• Without comprehensive clean-energy reform, Washington taxpayers will spend $760 million more over the next 10 years to subsidize wealthy oil and gas companies, and this is on top of their already record profits.
Costs of inaction

• The CBO predicted in May 2009 that climate change would cause decreases in future U.S. gross domestic product of between 3 and 5 percent, and global GDP of as much as 10 percent by the end of the century.

• Washington’s farmers contributed $6.8 billion to the state economy in 2007 alone, yet will lose ground to insect pests and decreasing irrigation supplies caused by climate change.

• A June 2009 report from the National Oceanic and Atmospheric Administration found that inaction on global warming will cause significant harm to the Northwest. Snowpack will decline and melt earlier, and heavy rainfall and flooding will increase during the winter. Summer water levels will fall, cutting down on production of hydroelectric power.
